Patent claims

1. A paper machine for the production of a paper,
board, tissue or other fibrous web (2), comprising
5 a press section (1) having at least one press nip
and comprising an impingement dryer (13) arranged
immediately after the press section,
characterized in that
the paper machine has an applicator (17) for
10 applying a coating color in the manner of a
curtain (21) or for the film application (26) of
coating color or for spraying (31) coating color
on.
- 15 2. The paper machine as claimed in claim 1,
characterized in that
it comprises a press section (1) having at least
one press nip, an impingement dryer (13) arranged
immediately after the press section (1), a first
20 part of a drying section (34.1), an applicator
(17) for applying a coating color in the manner of
a curtain (21) or for the film application (26) of
coating color or for spraying (31) coating color
on, and then a second part of a drying section
25 (34.1).
3. The paper machine as claimed in claim 1 or 2,
characterized in that
it has a machine speed of more than 1500 m/min,
30 preferably of more than 1700 m/min, in particular
of more than 1800 m/min.
4. The paper machine as claimed in claim 1, 2 or 3,
characterized in that
35 the coating color has a viscosity in the range
from 500 to 800 Pa·s.
